

A Company Specializing in Environmental Protection and Remediation Technologies

**SWISS DISTRIBUTOR PURCHASES ADDITIONAL
WATER TREATMENT SYSTEM**

April 25th, Guelph, Ontario, ENPAR Technologies (ENP.V) is pleased to announce that its Swiss Distributor, Aqua & Terra, has purchased a specialized system for remediating drinking water sources that are contaminated with nitrate.

Dr. Gene Shelp, President and CEO for ENPAR stated, "We are greatly encouraged by the repeat business from Aqua & Terra, which speaks to the quality and performance of our products. Limited drinking water resources in many areas of the world are often prone to nitrate contamination from agricultural operations. Our leading-edge water treatment system can target specific contaminants such as nitrate."

It is reported that 40% of groundwater in Europe is already seriously polluted with nitrate, In Germany for example, nitrate can be several times higher than the allowable 50 mg/L limit in areas of intensive animal farming.

"The European market is large and offers tremendous opportunity for Enpar and its distributors" said Dr. Shelp.

Within the human body, nitrates are converted into poisonous nitrites, which increase the risk of cancer and can lead to methemoglobinemia, or "blue baby" syndrome. Nitrates are also responsible for over-fertilisation of water streams, lakes and seas, resulting in oxygen-deficient ecosystems.

ENPAR's suite of water treatment technologies are enabling Aqua & Terra to redefine its growth strategy and make the transition from managing predominantly waste water to drinking water issues.

ENPAR is a "Water Technology Company" applying its patented and proprietary "Electrochemical Technologies" to the treatment waste water and drinking water contaminated by metals or nutrients i.e., nitrate/ammonia associated with the mining, metal processing, chemical, agricultural, municipal and waste management sectors.
